INFRASTRUCTURE MODERNIZATION

Modernizing Your Global Infrastructure Through an SD-WAN Transformation

Situation

- Need to modernize network capabilities across 1,400 locations
- Need to reduce infrastructure operating cost
- Need for visibility into status of migrations

Approach

AustinCSI provided visibility into current infrastructure costs for each of the organization's locations to determine appropriate vendors for maximum cost savings and optimal performance. Additionally, we created a framework for centralized migration tracking & reporting of hardware and circuits and a strategy for managing site readiness and communication.

Results

- Documented current and future state analyses
- Created country-specific business cases and communication plans
- Managed multiple vendors to ensure program success
- Created a centralized repository for all required data
- Created processes to track the delivery of hardware and circuits to ensure migration readiness per location
