Cloud Strategy

Cloud Migration

Cloud Application Modernization

TOTAL COST OF OWNERSHIP

Cloud Operating Cost Reduction Through Application Modernization

Situation

- Need to expedite cloud migration activities
- Need to refactor legacy on-prem applications to exist in a cloud environment
- Need to reduce Total Cost of Ownership (TCO) and operational support
- Need a standardized approach for cloud migration

Approach

AustinCSI conducted a cloud maturity assessment, provided the architectural design, approach to refactoring, and best practices for cloud governance. We executed and oversaw the migration, refactoring, and optimization activities to minimize future operational support and enable automation opportunities for the organization.

Results

- Expedited the application migration to the Azure cloud and reduced TCO
- Advanced existing cloud transformation efforts
- Refactored applications for optimal functionality in the cloud
- Improved policies around cloud governance and minimized operational support
